

# MSS® -MOP Sanitation Disinfect

## Sanitizing Agent for Polished and Sensitive Floors

### Properties

It is a concentrated cleaning agent with disinfectant effect used in the MOP SIL System. It provides effective cleaning and disinfection on all kinds of surfaces and floors. It has been tested and approved in accredited laboratories that it does not allow the growth of microorganisms on the surface. MSS Mop Sanitation Disinfect does not damage the texture of mop and cleaning cloths and the applied surface, and does not leave any traces. It destroys pathogenic microorganisms in the environment flora. It is effective at any temperature, economical and environmentally friendly.

**Composition:** Contains nonionic surfactant, solvent, biocide, preservative, perfume and dye.

**Physical Properties:** Pink colored liquid

### Usage areas

The risk of contamination is important in institutions with high hygiene requirements such as hospitals, schools, kindergartens, nursing homes for the elderly. The MOP Delete system is an economical, ergonomic and fast system that such institutions can safely use. At the same time, suitable for large areas such as shopping malls, hotels, airports, pharmaceutical factories, food production areas etc.

### Usage and Amount

MSS Mop Sanitation Disinfect is suitable for use with dosing units in mop washing machines.

In the final rinse, it is dosed into the machine and absorbed into the mops and cloths in a homogeneous and correct ratio.

**Amount of usage;** 5 – 7 mL per 1 L of water

The adjustment of the dosing pumps is made by the MSS Group Sales Technical Support Consultant and is checked periodically.

### Note

There is no need for other surface cleaners such as MOP Sanitation Sensitive on surfaces where MOP Sanitation Disinfect is used. It is possible to sanitize (both disinfection and cleaning) with a single product.
